

## “BACK TO BACK” HEAT PUMP INSTALLATIONS

A back to back installation applies to a wall or floor mounted heat pump. It means that the outdoor unit is directly behind or below the indoor unit. Installation is for a single level dwelling only. The outdoor unit is mounted on brackets.

**An extra charge will be applied for any installation which does not fit the criteria below.**

A back to back heat pump installation includes the following maximum allowances:

- Electrical isolator (waterproof type)
- Refrigerated Pipe **5 metres only** (between indoor and outdoor units)
- Power point **within 5 metres** of indoor/outdoor heat pump position
- PVC Trunking **2 metres only** (to cover pipes)
- PVC end cap x 1
- Brackets
- MCB on switch board (if required)
- A single visit for installation.
- Electrical compliance certificate
- Manufacturer’s Warranty
